

Sample 1:

```
list = List([
  { name: "Alice", age: 30, city: "NY", dept: "HR" },
  { name: "Bob", age: 25, city: "LA", dept: "IT" },
  { name: "Carol", age: 35, city: "NY", dept: "Finance" }
])
```

```
filtered = list ? (city == "NY" and age >= 30) + country = "USA" - dept
selected = filtered -> (name, age, country)
```

```
if filtered
  for person in selected
    puts person
  end
else
  puts "No matching records found."
end
```

Sample 2:

```
list = List([
  { name: "Dave", age: 40, city: "NY" },
  { name: "Eve", age: 28, city: "LA" },
  { name: "Frank", age: 33, city: "NY" }
])
```

```
filtered = list ? city == "LA"
filtered = filtered ? age < 30
updated = filtered + status = "active"
names = updated -> (name)
```

```
if names
  puts names
else
  puts "No active users found."
end
```
